

## Overview

---

The firmware, "LL\_IR", for the Technovision VCDC controller is designed to repeat (for a pre-programmed duration) DVDs installed in various consumer DVD players, including (in order of compatibility):

- Pioneer DV-333.
- Pioneer DV-525K.
- Toshiba
- Apex

## Installation

---

The VCDC should be placed in front of the player(s), in sight of the infrared receiver. All the units, including the VCDC, should be plugged into the same power-bar as the VCDC firmware is designed to work only if the players and controller are turned on at the same time.
